

Training Provided with your SMART Display

SMART[®]

Getting Started

When your SMART displays are installed in your school, we will arrange a familiarisation training session where we will cover the basics such as:

- Powering on
- Basic functionality of the display
- Connecting teachers' computers
- Screen sharing
- SMART software
- Connecting with Google or OneDrive
- Demonstration of the main features
- Maintenance of the display

If your school uses student devices, we can also demonstrate how you can get more out of those student devices through the SMART software suite and your SMART interactive panels.

In addition to the familiarisation training we provide, there are also many resources built-in to the interactive panels as well as available online through SMART that will help you to start maximising the use of your SMART display in the classroom. These resources include:

In-product Training

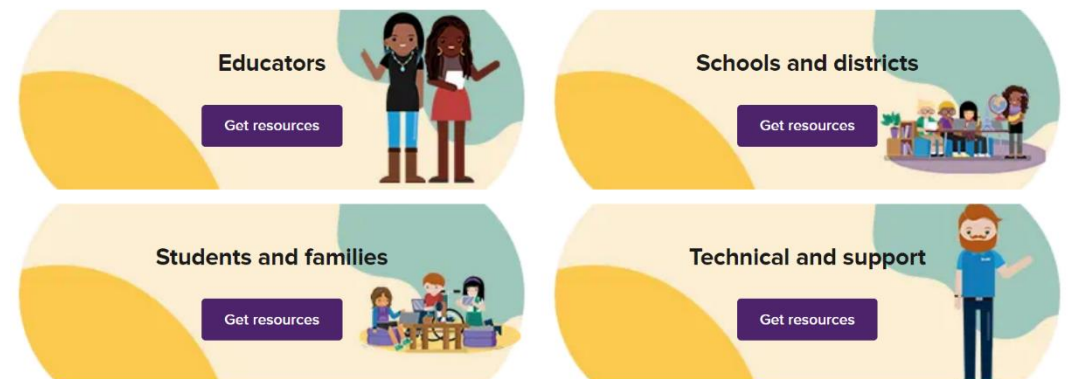

When you turn on your new iQ-powered SMART display, a welcome screen with animations will guide you through the main features of the interactive panel. Teachers will have easy access to this step-by-step guide whenever they need it.

On-Demand Online Resources

SMART have a wide range of on-demand online resources and instructional resources to help you learn more about how to use the features of your SMART display.

Video Tutorials

As well as on-demand lessons, SMART have a large collection of instructional videos to help teachers and technicians get started and set up their SMART interactive panels.

One Step Further

Following the familiarisation training session, further training can be arranged directly with your school. This training is comprised of 60-minute sessions and is focused on developing your teachers' use of their SMART technologies. A focus for the training can be determined and may include, but is not limited to:

- How to use SMART notebook effectively
- Creating lessons and games in Lumio
- Using your SMART technology for specific curricular areas
- Getting the most out of student devices through using Lumio
- In-depth training for interested staff members who can then assist with internal training and development

SMART provide qualified trainers directly from our Distribution Partner, Avitor, as well as our wider SMART reseller network throughout Ireland.

Mark Hartwright, Education

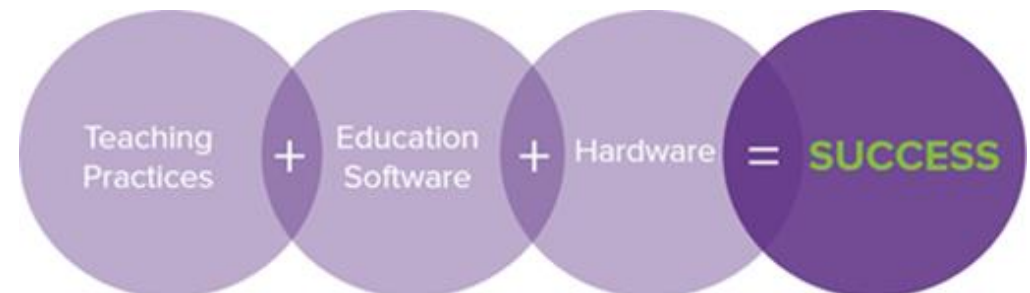

Roisin Fulcher, Education Specialist

Charlie Gallen, SMART Specialist

Mark, Roisin and Charlie support the implementation of SMART products in local classrooms and are key points of contacts at SMART for Ireland, Mark is a former teacher and the education manager for Smart, he is based in the UK but is available for online sessions. - SMART Innovators
- Certified Trainers
- Complimentary

Teachers are **342%** more likely to achieve outstanding success when using teaching best practices and technology frequently.

Setting up for Success

SMART's goal is to help you implement a "train-the-trainer" model within your school to develop the knowledge and use of SMART classroom technology. Our plan will help build capacity and scale to move teachers from basic engagement with technology to empowered lifelong learners who purposefully integrate technology into student driven learning experiences. The purchase of IFPs is just the beginning of realising the power and potential of this valuable instructional tool.

From the very outset at the initial orientation training provided, your SMART trainer will, in conjunction with senior school management, try and identify teachers who are keen to learn more and expand their knowledge about the SMART solution, with a view to identifying educators who can help expand the "train-the-trainer" model and dissipate their knowledge within the school.

SMART®

Maximizing your investment Professional Learning with SMART

Why it matters

- ✓ With more than 60 million teachers, students, and leaders engaging with SMART all over the world, we are invested in their success.
- ✓ High-quality professional learning can help your educators integrate technology effectively to improve learning outcomes.
- ✓ Connecting best instructional practices with interactive educational technology builds a foundation for student success.
